

LED trailing effects

★ Overview

This example shows 8 LED trailing effects.

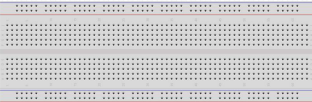

★ Specification

★ Pin definition

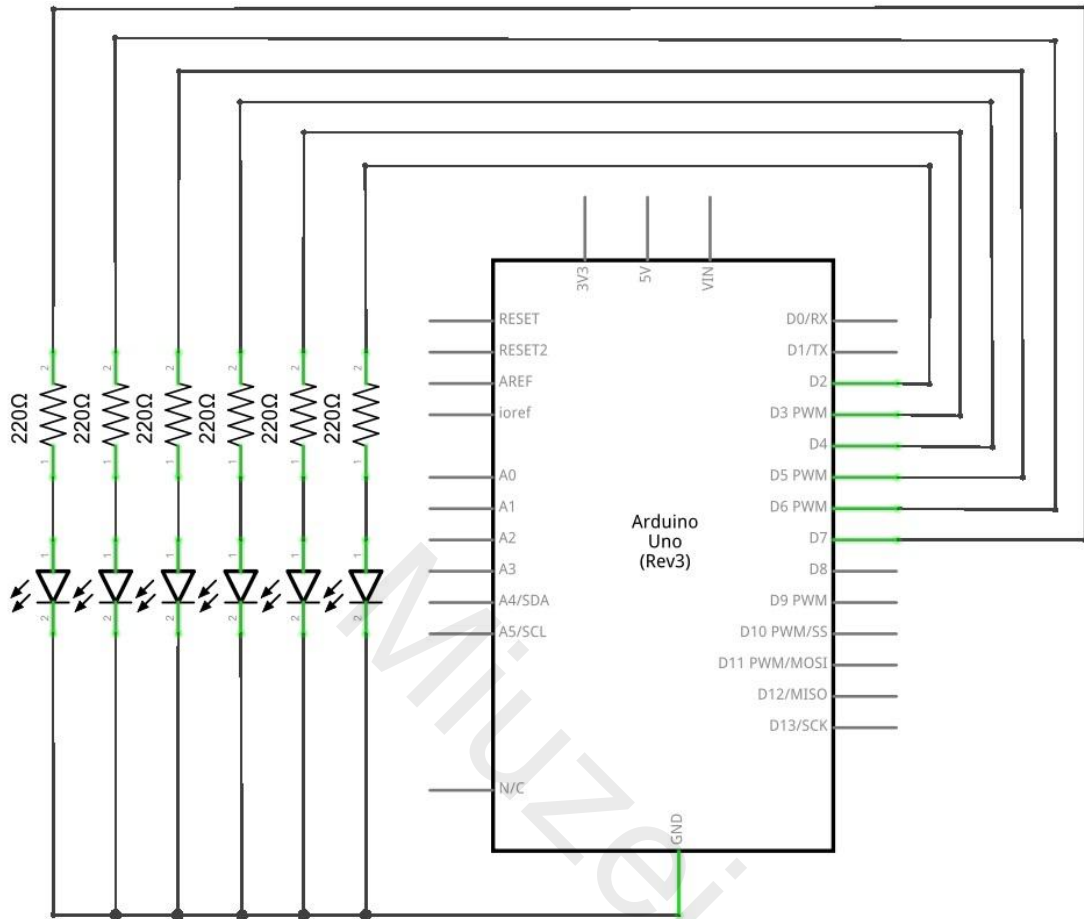

LED	Arduino
Long pin	-> +5V
Short pin	-> GND

★ Hardware required

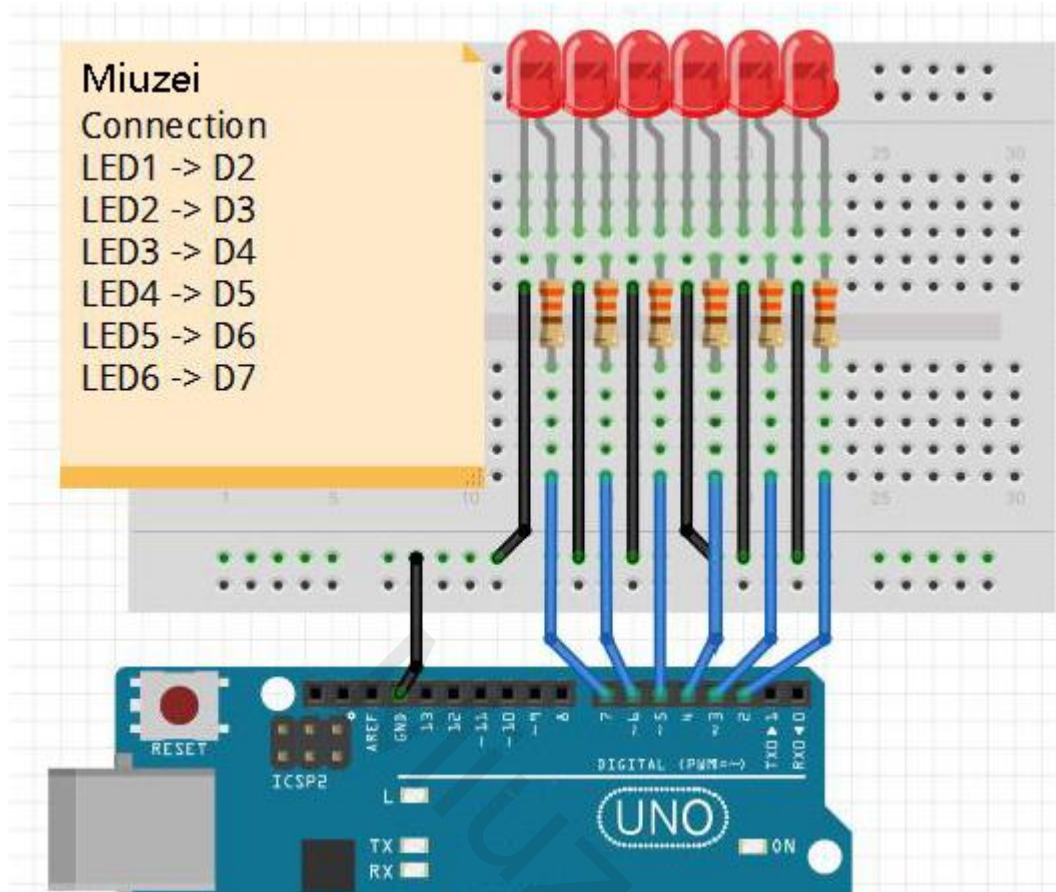

Material diagram	Material name	Number
	220/330Ω resistor	6
	LED	6
	USB Cable	1
	UNO R3	1
	Breadboard	1
	Jumper wires	Several

Connection

★ Schematic

★ Connection diagram

Note : The longest LED of the pin is connected to the digital signal port *(D*).

★ Sample code

Note : sample code under the **Sample code** folder

```
int BASE = 2;
int NUM = 6;
void setup()
{
    for (int i = BASE; i < BASE + NUM; i++)
    {
        pinMode(i, OUTPUT);    //set port 'i' as an output port
    }
}
void loop()
{
    for (int i = BASE; i < BASE + NUM; i++)
    {
        digitalWrite(i, LOW);
        delay(200);
    }
    for (int i = BASE; i < BASE + NUM; i++)
    {
        digitalWrite(i, HIGH);
        delay(200);
    }
}
```

★ Example picture

★ Language reference

Tips : click on the following name to jump to the web page.

[int](#)

[pinMode\(\)](#)

[OUTPUT](#)

[for\(\)](#)

[HIGH](#)

[LOW](#)

[digitalWrite\(\)](#)

[delay\(\)](#)

★ Application effect

You'll see all the LEDs will turn on/off regularly.

About Miuzei:

Miuzei found in 2011 , which is a professional manufacturer and exporter that concerned with open-source hardware research & product development, We have more than hundred engineers devote to developing open source hardware like Arduino, Raspberry pi ,3d printers , robots.

Miuzei committed to make more creative open source products and provide richer knowledge for enthusiasts worldwide. No matter what your ideas are, we provide various mechanical parts and electronic modules to turn your ideas into success.

Would you like to experience our new release products for Free ? If you are intersted with that you could feel free contact with us by email: support@miuzeipro.com
